Education

Eastport Institute of Technology (Fictional) *Sep. 2019 - Jun. 2023*
BSc in Computer Science Seattle, WA
GPA: 3.72/4.00

Relevant Coursework: HCI, Software Engineering, Mobile Computing, Statistics

Professional Experience

Brightway Health Technology (Fictional) *Aug. 2023 - Sep. 2026*
Mobile Software Engineer Seattle, WA

- Built Android appointment and reminder features using Kotlin, Jetpack Compose and local persistence.
- Reduced cold-start time from 2.8 s to 1.9 s on a fixed mid-range test device through lazy initialization.
- Added offline request queues and explicit conflict resolution for interrupted network connections.
- Worked with designers to improve screen-reader focus order and scalable-text layouts.
- Instrumented startup phases and reported both median and p95 timings over 50 repeated cold starts.
- Tested retry behavior after airplane-mode transitions and process recreation with unsent requests.
- Added UI-state tests for loading, empty, offline and partially failed screens.
- Wrote engineering notes on accessibility decisions and reviewed interactions with a screen-reader user.

Fieldstone Digital (Fictional) *Jun. 2022 - Aug. 2022*
Frontend Engineering Intern Remote

- Implemented accessible React forms with keyboard navigation and inline validation.
- Added component tests and fixed layout issues across supported viewport sizes.
- Collaborated with a designer to define visible focus states and readable error messages.
- Built regression cases for narrow screens, zoom and lengthy translated labels.
- Documented component behavior and added examples for future contributors.

Selected Projects

Accessible Transit Companion *2025 - 2026*
Kotlin, Jetpack Compose, Room

- Built a transit-planning prototype with offline favorites and large-text navigation.
- Ran moderated usability sessions with eight volunteers and revised three confusing interaction flows.
- Created consent scripts and task scenarios for the eight usability sessions; anonymized observations.
- Distinguished completion time, navigation errors and subjective feedback rather than merging them into one score.
- Added persistent error states and recovery actions after participants struggled with network failures.

Interface Accessibility Test Kit *2024*
TypeScript, React, Playwright

- Created repeatable keyboard and contrast checks for a sample component library.
- Documented the limits of automated checks and a manual screen-reader review procedure.
- Added checks for accessible names, focus restoration after dialogs and keyboard traps.
- Created a sample report separating automatically detected failures from manual review items.
- Documented false-positive scenarios and versioned the test fixtures with the component examples.

Offline Notes Synchronization Prototype *Jan. 2026 - Jun. 2026*
Kotlin, Room, WorkManager, REST

- Built an offline-first notes app with persistent pending changes and background synchronization.
- Defined merge rules for concurrent edits and exposed unresolved conflicts to the user.

- Tested app termination, authentication expiry and interrupted uploads with repeatable fixtures.
- Documented local encryption assumptions and excluded sensitive personal data from test records.

Mobile Performance Benchmark Notebook *2025*

Kotlin, Android Benchmark, Python

- Created repeatable benchmark cases for startup, screen transitions and local database reads.
- Recorded device model, operating-system version and thermal conditions with each test run.
- Compared warm and cold starts and separated network delays from rendering costs.
- Added plots of percentile timings and annotated regressions after dependency upgrades.
- Documented why results from one device could not represent the entire user population.

Inclusive Form Design Playground *2026*

TypeScript, React, Playwright

- Built sample forms with alternative validation timing, focus management and error announcements.
- Tested keyboard-only completion, screen-reader reading order and long translated text.
- Worked with two fictional designers to define acceptance criteria for recoverable form errors.
- Recorded usability observations from six volunteers and separated preferences from demonstrated task failures.
- Produced a checklist and examples illustrating when human accessibility review remains necessary.

Technical Skills

Programming Languages: Kotlin, TypeScript, Java, SQL

Frameworks & Libraries: Jetpack Compose, React, Room, Playwright

Systems & Tools: Android Studio, Git, CI pipelines

Specializations: Mobile performance, offline synchronization, accessible interfaces

Honors & Awards

Eastport Inclusive Design Challenge 2023 – *First place for an accessible campus navigation prototype.*

Product Accessibility Contribution Recognition 2026 – *Recognized accessibility fixes and contributor documentation.*
